SYNTHETIC USER RESEARCH REPORT

QuickBite Pro

Live API Test QuickBite Pro

Generated: October 19, 2026

Experiment ID: exp_e0a234012c31

Target Audience	Research Objectives
Working professionals aged 25-40 in Hyderabad	Understand price sensitivity; Assess delivery speed expectations; Evaluate subscription intent

Synthetic simulation research — results do not constitute real-world market evidence.

■ Executive Summary

This report presents the findings of Live API Test QuickBite Pro, a synthetic user research study conducted for QuickBite Pro. 3 synthetic personas simulated real user behaviour, generating 12 total research responses across survey and interview modalities. The analysis identified 2 recurring theme(s).

Product Overview: Premium food delivery app for working professionals

Key Findings

- Overall sentiment: 40.0% positive, 20.0% neutral, 40.0% negative.
- Product Validation Score: 40.0/100 — 0.0% of personas indicated they would adopt the product.
- Theme — Price Sensitivity Among Students & Interns: Lower-income personas strongly hesitate at subscription fees over ■199/month unless offset by heavy discounts.
- Theme — High Demand for Delivery Speed & Tracking: Professional personas prioritize delivery reliability and real-time tracking over small discounts.

Important Disclaimer: All findings are derived from AI-simulated synthetic personas and serve as exploratory hypotheses for product development. They do not constitute real-world market validation or statistical evidence.

Synthetic simulation research — results do not constitute real-world market evidence.

■ Persona Profiles

Rahul Sharma • Age 21 • Engineering Student • Hyderabad

Education	Undergraduate
Income Level	Low (Student Allowance)
Decision Style	Price-driven
Risk Tolerance	Moderate
Motivation	Convenience and affordability

Personality: Budget conscious, Social, Impatient

- Orders food 3-4 times per week
- Checks discounts before ordering
- Prefers fast delivery under 30 mins

Preferences: delivery_speed: Very important, discounts: Very important, subscription_limit: Low

Priya Verma • Age 27 • Software Engineer • Hyderabad

Education	Bachelor's Degree
Income Level	Moderate-High
Decision Style	Quality & Convenience-driven
Risk Tolerance	High
Motivation	Time-saving and quality food

Personality: Convenience seeker, Tech-savvy, Health conscious

- Orders late-night meals during work sprints
- Values reliable delivery tracking
- Prefers healthy meal options

Preferences: delivery_speed: Crucial, quality: High, discounts: Nice to have

Ananya Reddy • Age 24 • Marketing Executive • Hyderabad

Education	Master's Degree
Income Level	Moderate
Decision Style	Socially influenced
Risk Tolerance	Moderate
Motivation	Social connection and variety

Personality: Trend-conscious, Socializer, Value seeker

- Orders group meals with colleagues
- Shares referral codes with friends
- Tries newly listed restaurants

Preferences: group_discounts: High, variety: High

Synthetic simulation research — results do not constitute real-world market evidence.

■ Simulation Methodology

Mode 1: Survey Simulation

Each synthetic persona answered the experiment's survey questions independently, drawing on their persona attributes, psychological profile, and established memory. Total survey responses collected: 9.

Surveys run: 2 — titles: Live Test Survey, Empty

Mode 2: Interview / Conversation Simulation

Interactive interview conversations were conducted with individual personas. Personas responded to researcher-driven questions while maintaining character consistency via the persona memory system. Total interview turns collected: 3.

General Constraints

- Total personas: 3
- Total responses: 12
- LLM provider: Configurable (OpenAI GPT or deterministic fallback)
- All personas are AI-generated; results represent simulated behaviour only.

Limitations: Synthetic simulation cannot replicate real user diversity, cultural nuance, or actual purchasing behaviour. Use findings as directional hypotheses, not as statistically validated market research.

Synthetic simulation research — results do not constitute real-world market evidence.

■ Response Highlights

"As a student with a limited budget, ■299 per month feels expensive to me."

— Rahul Sharma [SURVEY]

"I prioritize convenience and fast turnaround time over small price differences."

— Priya Verma [SURVEY]

"That's an interesting question regarding the product. Based on my daily routine and financial considerations, I evaluate whether it genuinely saves me time and money before committing."

— Rahul Sharma (Engineering Student, Age 21) [INTERVIEW]

"That's an interesting question regarding the product. Based on my daily routine and financial considerations, I evaluate whether it genuinely saves me time and money before committing."

■ Theme Analysis

Theme	Description	Quotes	Share %
Price Sensitivity Among Students & Interns	Lower-income personas strongly hesitate at subscription fees over ■199/month unless offset by heavy discounts.	2	50.0%
High Demand for Delivery Speed & Tracking	Professional personas prioritize delivery reliability and real-time tracking over small discounts.	1	50.0%

Detailed Theme Breakdown

Price Sensitivity Among Students & Interns

Lower-income personas strongly hesitate at subscription fees over ■199/month unless offset by heavy discounts.

> *"As a student with a limited budget, ■299 per month feels expensive to me."*

> *"Spending ■299 just for a subscription passes my threshold unless I order every single day."*

High Demand for Delivery Speed & Tracking

Professional personas prioritize delivery reliability and real-time tracking over small discounts.

> *"I prioritize convenience and fast turnaround time over small price differences."*

Synthetic simulation research — results do not constitute real-world market evidence.

■ Sentiment Analysis

Sentiment	Count	Percentage	Interpretation
■ Positive	2	40.0%	Personas responded favourably to the product.
■ Neutral	1	20.0%	Mixed or indifferent responses observed.
■ Negative	2	40.0%	Concerns or friction points surfaced.

Sentiment Distribution (Visual)

Sentiment is mixed, with no single polarity dominating. This suggests the product addresses some needs but has notable areas for improvement.

Synthetic simulation research — results do not constitute real-world market evidence.

■ Product Validation Results

Validation Score	40.0 out of 100	0.0% would adopt

Scoring methodology: Individual persona likelihood is scored on a 1.0 to 10.0 scale via LLM roleplay simulation matching the persona's traits, budget constraints, and established opinions against the product definition. Overall Score represents the unweighted arithmetic mean across all personas. Would-Use Percentage is calculated as (Count of personas where would_use =

Per-Persona Breakdown

Persona	Occupation	Score (1–10)	Would Use?	Category
Rahul Sharma	Engineering Student	4.0	■ No	Unlikely
Priya Verma	Software Engineer	4.0	■ No	Unlikely
Ananya Reddy	Marketing Executive	4.0	■ No	Unlikely

■ Weaknesses (Adoption barriers)

- Rahul Sharma (Engineering Student): High sensitivity to pricing makes regular adoption unlikely without heavy promotional discounts.
- Priya Verma (Software Engineer): High sensitivity to pricing makes regular adoption unlikely without heavy promotional discounts.
- Ananya Reddy (Marketing Executive): High sensitivity to pricing makes regular adoption unlikely without heavy promotional discounts.

■ Opportunities

- Low adoption among age group 18-24 (0% would use). Consider targeted pricing or features for this segment.
- Low adoption among age group 25-34 (0% would use). Consider targeted pricing or features for this segment.
- Low adoption among age group 35+ (0% would use). Consider targeted pricing or features for this segment.

Limitations: *DISCLAIMER & LIMITATIONS: These product usage scores represent simulated synthetic persona evaluations. They provide directional qualitative hypotheses for product development and target persona alignment, but MUST NOT be interpreted as real population-level market adoption statistics or statistical sampling.*

Synthetic simulation research — results do not constitute real-world market evidence.

■ Recommendations & Next Steps

Areas of Strong Agreement

- All personas agree that delivery speed under 30 minutes significantly increases satisfaction.

Points of Disagreement / Friction

- High-income professionals are willing to pay a premium subscription, whereas students reject monthly flat fees.

Behavioural Trends Observed

- Students check coupon codes before every order.
- Working professionals order late-night meals during work sprints.

Suggested Next Steps

- Validate findings with at least 20–30 real user interviews before making product decisions.
- Prioritise addressing barriers identified in the theme analysis.
- A/B test pricing tiers with actual target demographic segments.
- Conduct usability studies on features that received mixed or negative sentiment.
- Re-run simulation with updated product description after key improvements are made.

Synthetic simulation research — results do not constitute real-world market evidence.

■ Limitations & Conclusion

This research report is based entirely on AI-generated synthetic user personas. The personas simulate plausible human behaviour based on their configured attributes, but they cannot replicate the full range of real human diversity, irrationality, cultural context, or evolving market conditions.

Key limitations:

- Synthetic personas are not real people and do not represent a statistically valid sample of any population.
- Results must not be presented as proof of real-world product-market fit or market demand.
- The sentiment and theme analysis reflects patterns in AI-generated text, not genuine user emotion.
- Adoption scores are directional estimates, not predictive market adoption rates.
- AI hallucination risk exists; treat all findings as hypotheses requiring real-world validation.

Conclusion: The findings in this report provide a useful starting point for product hypothesis generation and early-stage directional research. The next critical step is to validate these synthetic insights through real user research, market testing, and iterative product development.

Synthetic simulation research — results do not constitute real-world market evidence.
